

BEAT THE CLOCK... THE TIME TO ACT IS NOW

Climate Change is one change we can't afford Let's beat the clock Grenada!

The longer we wait to act on climate change, the harder it will be on our economy. Climate change means unpredictable weather patterns, increased unemployment and rampant natural disasters. Our country has to act now before it's too late.

- Grenada has already begun to feel the effects of climate change. Fishing communities suffer from reduced fish stocks. Coastal areas in Grenada have experienced erosion of the coasts, and this can be a deterrent for the tourism sector as the sand and sea activities are a main reason for tourists to visit the island. Rising sea water levels will increase flooding in coastal areas. This can impact the sea life that needs the reefs to survive. Residents in rural and coastal areas of Grenada are more vulnerable to the effects of climate change as these areas are more susceptible to the high winds, increased severity of weather conditions and possible landslides.
- A rise in sea level could cause beach erosions, and loss of coastal properties. More unpredictable weather phenomena such as storm surges could result in more instances of flooding, land shifts, landslides, fallen trees and utility lines.
- Restoring and abandoning infrastructure damaged by natural disasters cost our economy millions of dollars.

The impact of climate change on Grenada

A horizontal banner featuring logos from several countries and international organizations. From left to right: United Nations Development Programme (UNDP) logo, United Nations (UN) logo, Japan's Ministry of Economy, Trade and Industry (METI) logo, Japan-Caribbean Economic Cooperation logo, The Commonwealth Games Federation logo, Grenada 2022 logo, BEAT THE CLOCK logo, 13th Asian Games logo, and the Commonwealth Games Federation logo.

VISIT www.adaptation-undp.org to learn more about how you can be a part of the change.

- 

Ways you can help include:

 - Proper disposal of waste
 - Recycling and reuse of waste products
 - Installing solar panels
 - Use other sources of renewable energy
 - Plant more trees
 - Littering
 - Using sustainable crop management techniques
 - Introduction of rain water storage systems
 - Implementing crop rotation techniques
 - Improving slope stabilisation techniques
 - Improve sustainable crop management techniques

BEAT THE GLOOM
You can help Grenada
against climate change

Be a part of the change

What is Climate Change?

Climate change is the change noted in the measures of climate lasting for an extended period of time. Current measurements for global temperatures are the warmest temperatures that the world has recorded and the rate at which weather conditions are warming is increasing quickly.

The signs of climate change

Increased temperatures

More intense natural disasters

Rising sea levels

Severe water shortages and droughts

Lower crop and fish yields

● Crops

Rainfall, hurricanes, and rising temperatures caused by climate change can negatively impact agriculture – particularly our main crop – nutmeg.

A reduction in nutmeg exports will cause the country to earn less foreign currency which impacts Grenada's overall GDP.

● Coastal ecosystems

Swamps and bays can easily be destroyed by a natural disaster.

This affects the survival of various fish and plants that thrive in these bodies of water.

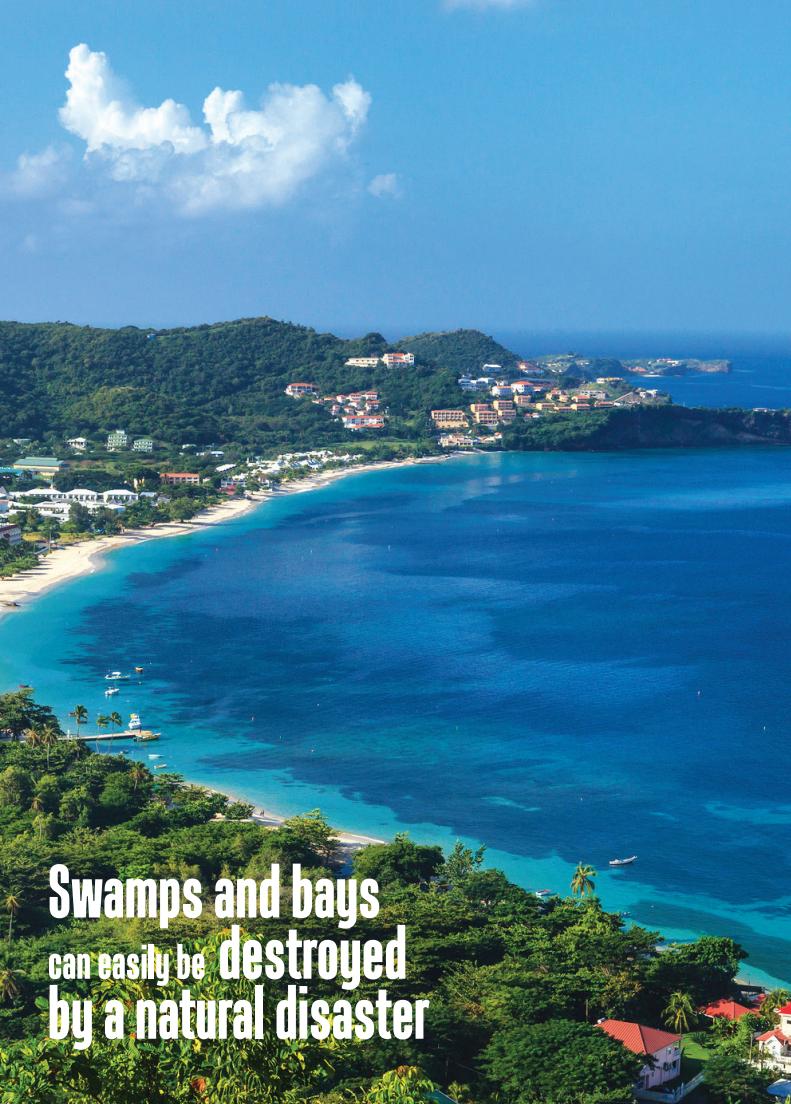

● Water resources

Changes in rain fall patterns could result in the reduction of some of the natural water courses on the island.

Uncommon heavy rainfall can cause water troughs to overflow and mix with soil, limiting access to clean water.

Rainfall, hurricanes, and rising temperatures caused by climate change can negatively impact agriculture – particularly our main crop – nutmeg

Swamps and bays can easily be destroyed by a natural disaster

● Tourism

Natural disasters can destroy hotels and cause roads to become impassable.

Land slippage can impact popular hiking trails.

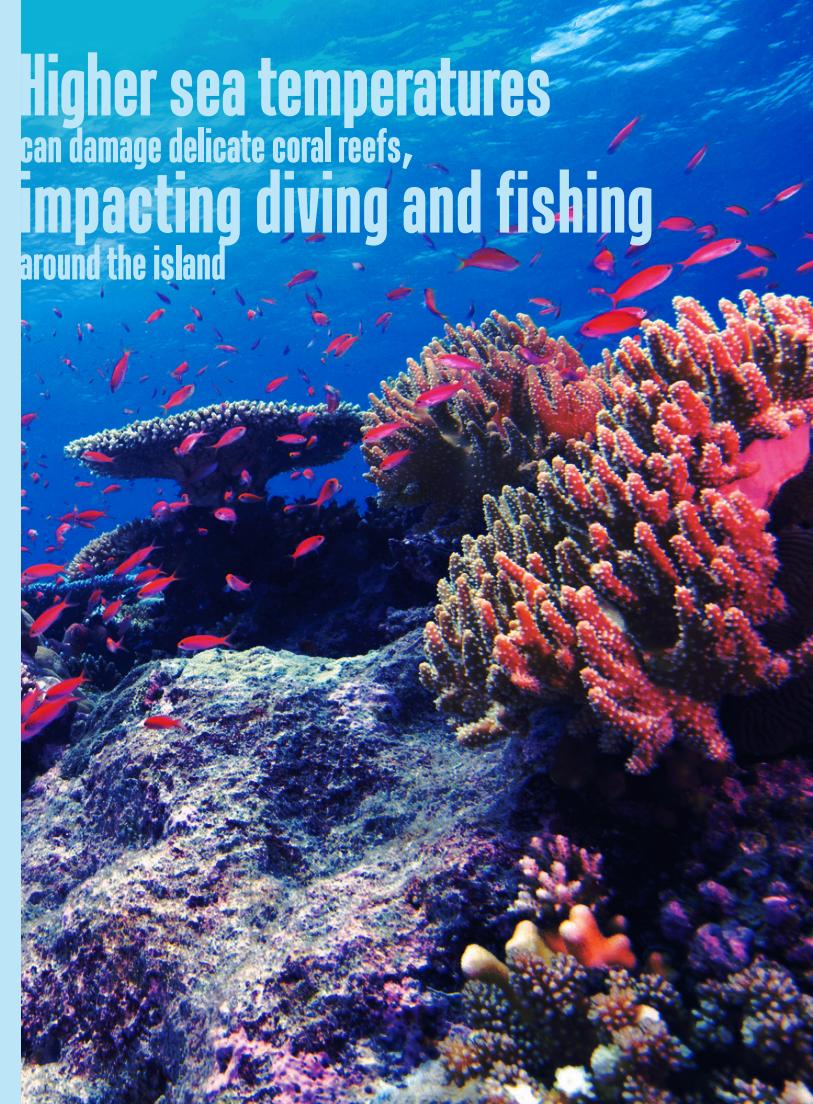

Higher sea temperatures can damage delicate coral reefs, impacting diving and fishing around the island.
